

Vidya Computer Institute — Website

Static site (HTML/CSS/JS) + Firebase Realtime Database. Koi build step nahi — direct GitHub se Vercel pe deploy ho jayega.

Files

- `index.html` — page structure
- `style.css` — design
- `config.js` — **sirf ye file edit karo** (naam, courses, contact, branches)
- `firebase-config.js` — apna Firebase project keys yahan daalo
- `script.js` — logic (isse chhedne ki zaroorat nahi)

Step 1: Content edit karo

`config.js` kholo, apna institute name, courses, phone, email, branches daal do.

Step 2: Firebase setup (enquiry form ke liye)

1. console.firebase.google.com pe naya project banao
2. Build → **Realtime Database** → Create Database (region: asia-southeast1, test mode)
3. Project Settings (⚙️) → General → "Your apps" → Web app (</>) add karo
4. Jo `firebaseConfig` object milega, usko `firebase-config.js` mein paste karo
5. Realtime Database → Rules tab mein ye set karo (basic security):

```
{
  "rules": {
    "enquiries": {
      ".read": false,
      ".write": true
    }
  }
}
```

Step 3: GitHub pe push karo

- Naya repo banao (github.com se, mobile browser se bhi ho jayega)

- Ye saari files upload karo (github.dev se drag-drop ya "Add file" se)

Step 4: Vercel pe deploy

1. vercel.com pe GitHub se login karo
2. "Add New Project" → apna repo select karo
3. Framework preset: **Other** (kyunki plain HTML hai)
4. Deploy dabao — 30 second mein live ho jayega
5. Har baar jab GitHub pe push karoge, Vercel automatically re-deploy karega

Enquiries kaise dekhein

Firebase Console → Realtime Database mein
`enquiries` node ke andar saari submissions
dikhengi (student ka naam, phone, course interest).

Aage kya add kar sakte ho

- Admin panel (enquiries dekhne/manage karne ke liye)
- Course detail pages
- Student login/certificate verification
- Gallery/testimonials section

Jab ye ready ho jaye aur aage badhana ho, bata dena
— next part (admin panel) ka prompt bhi bana denge,

Momento wale pattern jaisa.
